

Instruments Used In Obstetrics & Gynecology

The image shows three pairs of artery forceps, which are surgical instruments used for clamping blood vessels. They are made of polished metal and have long, thin jaws with fine serrations. The handles are designed with loops for the fingers. They are arranged on a solid red background. One pair is at the top, another in the middle, and a third at the bottom right.

Artery Forceps

A kidney-shaped metal tray, likely made of stainless steel, is shown against a dark red background. The tray is empty and has a smooth, reflective surface. A teal-colored label with rounded corners is centered on the tray, containing the text "Kidney Tray" in white.
